SCBI Tree Disease Guide

Isabella Dangler & Kristina J. Anderson-Teixeira

Introduction

The aim of this guide is to identify tree species of concern within the SCBI ForestGEO plot, and the diseases that are most likely to affect them, so that we can properly identify the causes of decline.

Methods & Definitions

Tree species concern levels

We assigned concern levels – high (H), moderate (M), or low (L) – to each tree species based on results of the SCBI ForestGEO mortality census, IUCN status, and the presence and lethally of pest and pathogen species.

Concern level based on observed tree mortality rates alone was defined as follows:

Concern level based on the fraction of alive but unhealthy ("AU" status) trees observed in the latest census was defined as follows:

Overall concern level was determined as follows:

1. If IUCN Red List status was anything other than "Least Concern", the species was flagged as high concern
2. If an exotic pest or disease with high / moderate lethality was known to be present in region, any species affected by that pest/ disease was flagged as H/M concern.
3. If either mortality rate or AU concern level was M or H, overall concern was assigned to match the highest concern level, but lowered one level in the case of species with <50 individuals in the plot and only one M or H ranking.
4. If IUCN Red List status was anything other than "Least Concern", there were no known highly lethal exotic pests or diseases present, and both mortality and AU concern levels were low, the species was flagged as low concern.

Identifying tree species - disease pairs

Tree Species of Concern

Table 1. Summary of the health/ mortality status of all tree species in the SCBI ForestGEO plot. Included is IUCN status, n of living individuals in the SCBI ForestGEO plot, numbers of known species of forest insects or pathogens (FIP) and exotic FIP (EFIP) affecting the species, levels of concern based on mortality rates and "alive-unhealthy" (AU) status, and overall level of concern based on these metrics. Codes: H = high, M = moderate; L = low. Tree species codes are defined in the document SCBI_ForestGEO_sp_ecology.csv.

					2021 concern level		
Tree species code	IUCN status	n living	n FIP	n EFIP	mortality rates	AU status	overall

Pictoral guide to most important pests & diseases

Insect pests

(these should be arranged logically. My preference would be to organize by type (categories below, from Tree-and-Forest-Health-Guide.pdf), then alphabetically. To make this work, we'll need to insert a column with type in the matrix)

Sapsuckers

Defoliators

Root/Shoot/Twig Insects

Bark Beetles/ Wood Borers

(insect species) *(insert brief description of symptoms to look for, pictures)*

Diseases

Rusts

Root

Cankers

Foliage

Vascular
